## TEST FOR MACULAR DEGENERATION

- Attach chart to a flat surface (like a refrigerator) and stand at arm's length.
- Put on your reading glasses or bifocals.
- Cover one eye.
- Focus on the dot in the center of the grid.
- If any of the lines on the chart appear distorted, wavy or are missing (while you are still looking at the center dot), this could indicate a problem.
- Repeat procedure for other eye.
- Call us at the office if you notice any changes or problems (as shown in the examples below).

Blurry areas  
and black  
spots.

Wavy or  
crooked lines.
